HTML Project

Overview

In this project you will **define** a goal for your 100-Day web project, then **prepare** to develop your page by designing it on paper, then **try** out your new HTML skills by creating the page, then **reflect** on your process.

Step 1: State your Goal

Write a few words about your project.

My project is going to be a hospital appointment book website. The user can book

appointment with doctors through this website.

What problems are you trying to solve?

We can see many people booking their appointment by going to hospital . So I'm creating this website.

What is your solution to this Problem statement?

_by using my website, they can easily find doctor's time availability and book appointment from our home and we can meet a doctor in person.for old age people we call a doctor to consult at home.

What are the features available in your Web Application?

_We can download the prescription which is sent by the doctor in the mail.

The past appointment will be seen in history both for doctors and patients.
