

My project

Description:

My project is going to be a hospital appointment website.

This project is used to fix appointments with doctors regarding their availability.

If we do this, we don't need to wait till the doctor come into the hospital...

Features:

1. If the user is a doctor, they should fill the details and upload their files regarding their medical course such as their university which did they finished their medical course with year, which department, hospital name, hospital mobile number etc.
2. If the user is a patient, they should fill the details such as their age and health issues.

THE ABOVE MENTIONED DETAILS IS MANDATORYTHE OTHER DETAILS IS MENTIONED BELOW WHICH IS COMMON FOR ALL THREE.

1. Name
2. Age and date of birth
3. Gender
4. email address
5. Pass word
6. Phone number.

FOR DOCTORS:

1. If the doctor signed up, the page will contains latest updates in medical field.
2. At the top of the page, they can see the notifications of appointments fixed by people.
3. They can see the list of appointments and accept them..
4. They can click on the checkbox if they finished their appointment.

FOR PATIENTS:

1. If they signed up and created the profile, they can search for a hospital by searching through the hospital name or entering the city name.
2. They can choose the department ex:orthology.
3. After that it will display the list of doctors in the hospital.
4. The user can select the doctors.
5. If they did it, it would show the time availability of the doctors.
6. The user can click on go if they want to continue or press back if they want to go to the previous page.
7. If they press go, it will show the email address and phone number of the doctor.
8. The doctor will receive notifications.
9. After meeting the doctor in person, the prescription will be sent through mail in pdf format if the patient missed the prescription..
10. We can register for vaccination.
